SIMONE ZOCANTE

Simone Zoccante

www.simonezoccante.com - simonezoccante@gmail.com

Mi chiamo **Simone Zoccante** e sono un **illustratore italiano specializzato in storia naturale, paleoarte e graphic design**. Da sempre studio **la zoologia, la storia naturale e la paleontologia**. In parallelo a questa passione per la storia naturale **ho sviluppato le mie abilità artistiche da autodidatta**.

Dopo circa **un decennio** nel campo delle arti visive, **dalla grafica alla pittura**, nel 2020 ho iniziato la mia carriera come illustratore scientifico e paleoartista professionista.

Ho lavorato ad **illustrazioni per libri e musei**, ho tenuto **lezioni e workshop sulla storia naturale e il disegno della fauna selvatica**, e **ho pubblicato libri sull'arte di ritrarre animali e soggetti naturali**. I miei lavori sono comparsi nella trasmissione **GEO su Rai 3** e attualmente scrivo per **la rivista mensile Focus Wild realizzando una rubrica dal nome "Safari Preistorico"** dedicata alla scoperta di iconici animali estinti.

Ho partecipato a diversi concorsi internazionali di arte naturalistica e paleoarte e nel 2022 le mie opere sono state premiate al **"Concorso di Paleoarte di Lourinhã"** organizzato dal Museo di Lourinhã (Portogallo), con l'opera **"I left my heart in Pikermi"**, e al **"Premio Italiano di Paleoarte"**, organizzato dal Museo di Montevarchi (Italia), con il dipinto **"Infernum"**.

Anche se ho iniziato la mia carriera con i media tradizionali, **ora lavoro principalmente in digitale**.

Sono specializzato in dipinti di grande formato, in particolare dipinti murali digitali, per musei ed esposizioni, ma poiché sono piuttosto versatile, **posso lavorare facilmente con formati più piccoli e con stili più adatti alle illustrazioni per libri e riviste**.

Nelle mie opere presto sempre **molta attenzione all'ambiente**, specialmente quando si tratta di ricostruzioni paleoartistiche. Prima di iniziare un mio disegno, **studio meticolosamente il paleoambiente** (clima, flora e fauna) e partendo da questi dati **ricostruisco la scena e le specie chiave che vi vivevano**.

Ultimamente ho iniziato a lavorare anche come **ricercatore indipendente**, su articoli scientifici, in particolare sulla pigmentazione dei vertebrati.

Collaboro anche con **Diorama Nature**, un progetto web sulla **storia naturale, come scrittore e conduttore in video e podcast**.

GIPETO BARBUTO

(*Gypaetus barbatus*)

ORDINE: ACCIPITRIFORMES

FAMIGLIA: ACCIPITRIDAE

SOTTOFAMIGLIA: GYPAETINAE

GENERE: GYPAETUS

SPECIE: BARBATUS

Un maestoso esemplare di **Gipeto** viene sorpreso dalla luce dell'aurora in una gelida mattina sulle montagne del **Caucaso**.

L'AVVOLTOIO SACRO

Mentre in Occidente il Gipeto è stato spesso considerato un animale pericoloso per le greggi, in Oriente questo avvoltoio è stato un emblema di regalità e sacralità in molte culture.

Nella mitologia persiana per esempio, il Gipeto è un simbolo di fortuna e felicità. Nell'antica Persia, si credeva che chi fosse stato azzurrito dall'ombra di un "Homa" (uccello leggendario spesso identificato con il gipeto) sarebbe diventato

AGOUTADO.

SPACCAOSSA

■ AREALE STORICO
■ AREALE ODIERNO

Il **Gipeto** è un avvoltoio dalle abitudini alimentari molto particolari. Si nutre infatti quasi esclusivamente di **ossa** e **midollo**.

Nontante il gipeto sia in grado di inghiottire ossa di dimensioni notevoli, quelle più grandi vengono lasciate cadere dall'avvoltoio in volo per essere spaccate in frammenti più piccoli e poi inghiottite.

BARBOUROFELIS LOVEORUM

THE SABRES DILEMMA

INTRO

Concealed OR Exposed?

Lacking modern canines and short incisors, exposed canines in subadult caninates have always been a field apart in various interpretations. In particular, some sources place the condition, hyperphosia and brachyphosia, although canines have sometimes been represented concealed, some others exposed.

BARBOUROFELIS ILLUSTRATED

1860, and the condition of external (sabre) teeth in their skull of animals? Was it a full exposed canine like case A? Is full concealed canine like case B? Or an intermediate condition like case C?

DEAD VS ALIVE

The skull of a living animal, like the tip of the jaw, is in the jaw position, the skull is in the jaw position, the skull is in the jaw position.

1, 2: CARNASSIALS

TIGER SKULL

In modern felids CARNASSIALS (teeth 1 and 2) are used in our felids. The animal makes the head, puts back the tip and the cheek and uses carnassials as a scissor. This is why felids need to have a brachyphosia. On the other side, they assume food on the side of the mouth.

1, 2: CARNASSIALS

MEGANTERON SKULL

Machairodontines had well developed carnassials, so it's probable that they assumed not like only in modern felids.

Push it TO THE LIMB

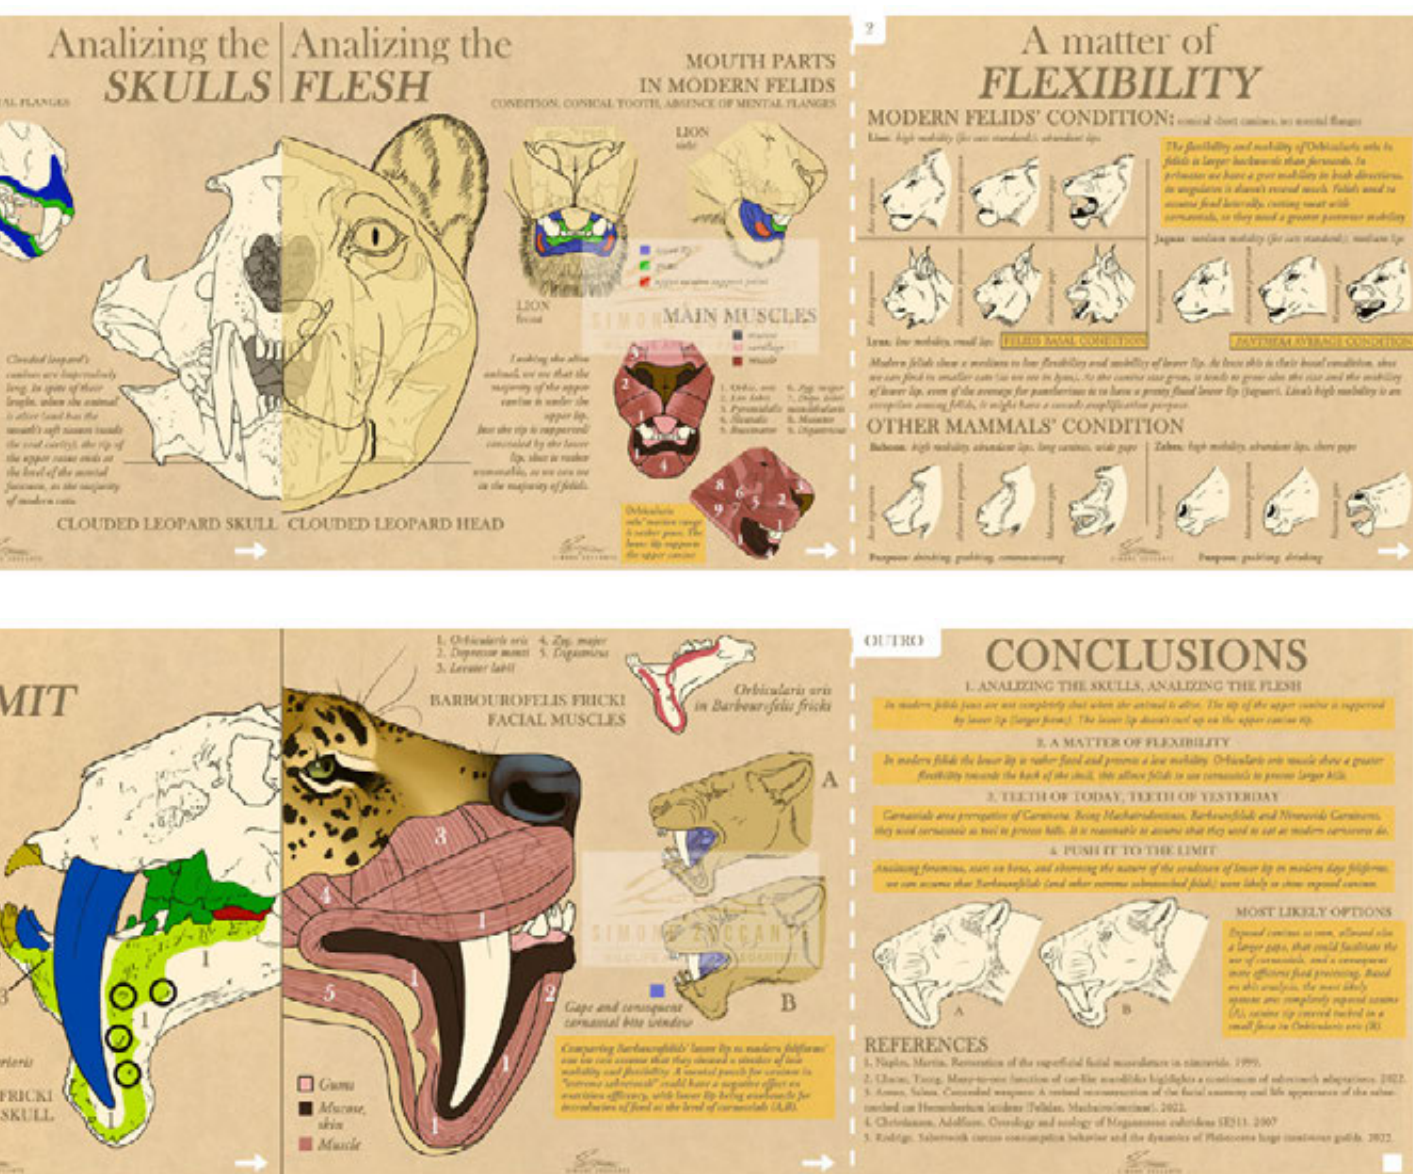

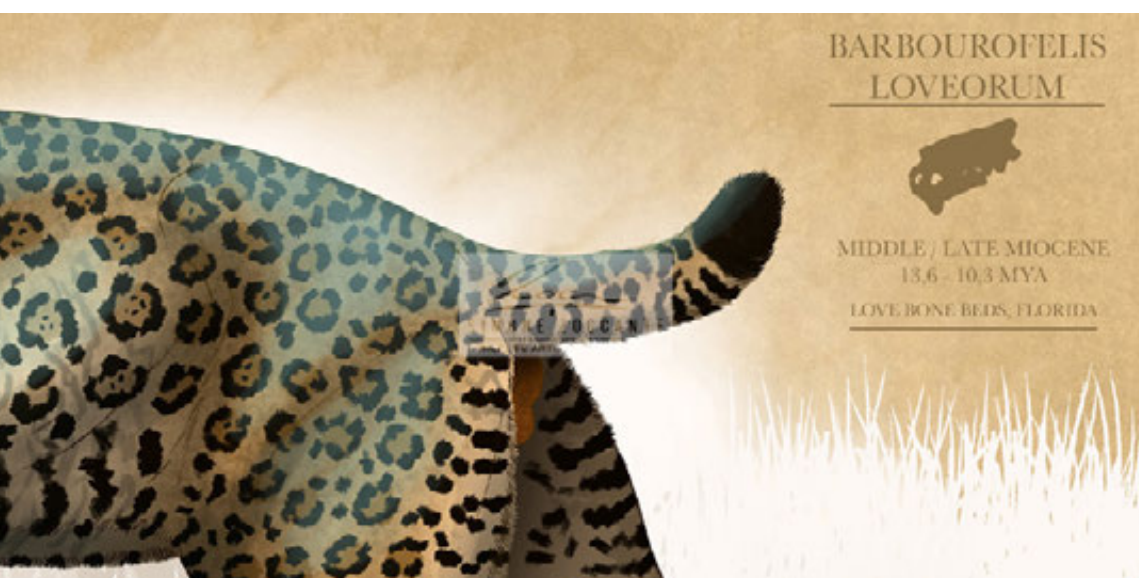

THE EXTREME CASE OF BARBOUROFELIDS

In Barbourofelids, (Machairodontines, and a few Machairodontines, Mammuthus, Megacerops) we can find an "extreme subadult" condition. In this form, the incisors, all the maxillary canines, large maxillary canines that support the hyperphosia canines. Due to this particular condition, effects on oral muscle distribution "W" side the extreme example of Barbourofelids tends to have a look on the condition.

MUSCLES

1. Orbicularis oris
2. Depressor menti
3. Quadratus labii inferioris

ARTIFICI NATURALI | *Viaggio nel mondo dell'illustrazione naturalistica digitale*

“Artifici Naturali” (literally “Natural Artifacts”) is a 2020 illustrated essay about the digital wildlife and naturalistic illustration. In this book we take a deep dive into this discipline, exploring various cases, styles and uses of wildlife illustration.
